

## Python code for transcription with whisper

Exemplary code for interview with ID 1

```
import whisper

model = whisper.load_model("medium")

mp4_path =
"C:/Users/julia/Desktop/Recordings/Interview_ID_1_Recording.mp4"

result = model.transcribe(mp4_path)

filepath = "C:/Users/julia/Desktop/Interview_ID_1_Recording.txt"

with open(filepath, "w", encoding="utf-8") as f:
    f.write(result["text"])

print("Transcript saved to:", filepath)
```
